

It is hard to believe how many different ways there are to build a trestle bent. We have selected a variety of designs to meet your needs. All of these jigs can be modified for round legs: just glue some styrene shim in the sides of the slots. You can make them as tall as you like by extending the legs out the bottom of the jig. All our jigs now come with full-size 1:1 drawings to help you visualize and plan your trestle.

Kits are available that include these jigs. Ask for Black Bear Construction Co. products at your local hobby shop.
